

# P.O.S.T. recovery gel

## AN AQUAPORIN RECOVERY SYSTEM

### THE CONCEPT

P.O.S.T. recovery gel is a hydration and soothing formula developed to support the skin following controlled dermatological procedures. Formulated to help restore balance by reducing discomfort, calming visible redness, and reinforcing hydration pathways.

### THE FUNCTION

This advanced recovery system works to:

- Replenish and maintain hydration
- Calm post-procedural inflammation
- Support barrier recovery
- Reduce visible redness and discomfort

The result is skin that feels refreshed, soothed, and optimally supported during recovery.

### THE COMPOSITION

A multi-functional complex of Aquaporin system, Hyaluronic Acid (multi-weight), Provitamin, and Carrageenan, selected for their complementary biological roles

- Aquaporin Complex supports water transport and balance within the skin
- Hyaluronic Acid (multi-molecular) provides layered hydration across different skin depths
- Provitamin B<sup>5</sup> (Panthenol) enhances barrier repair
- Carrageenan delivers an immediate cooling effect to reduce heat and discomfort

### THE MECHANISM

At the surface, the formula forms a hydrating and protective layer, reducing transepidermal water loss (TEWL). Water distribution pathways are optimised within, supporting continuous hydration while calming inflammatory responses.

### THE OUTCOME

Skin appears hydrated, calmed, and visibly restored with reduced redness and improved comfort.

### THE POSITIONING

A post-procedure recovery essential, formulated to complement advanced skin resurfacing protocols and enhance treatment tolerance.

### APPLICATION

Applied immediately post-treatment, the gel delivers instant cooling relief and sustained hydration. Can be used alone or combined with targeted treatments such as AZ blue drops to further enhance recovery performance.

### PHILOSOPHY

Healthy skin is the result of optimal cellular communication. This technology supports the signals that guide renewal, repair, and skin health restoration.

# P.O.S.T. recovery gel

**PRODUCT SIZE**  
100ml

### INGREDIENTS (INCI)

Aqua (Water), PEG-8 Caprylic/Capric Glycerides, Isosorbide, Betaine, 1,2 Hexanediol, Glycerin, Panthenol, Glycereth-26, Propanediol, Xylitylglucoside, Glyceryl Glucoside, Anhydroxylytol, Sodium Levulinat, Hydrolyzed Jojoba Esters, Carrageenan, Xylitol, Sodium Hyaluronate, Hydroxyethyl Acrylate/Sodium Acryloyldimethyl Taurate Copolymer, Polyacrylate Crosspolymer-6, Potassium Sorbate, Sodium Phytate, Glucose, T-butyl Alcohol.

### INDICATIONS

All skin types  
Post-treatment skin support  
Sensitive or reactive skin  
Skin redness & discomfort  
Compromised barrier  
Preference for lightweight, gel texture

### PRODUCT DESCRIPTION

P.O.S.T. recovery gel is an advanced aquaporin activation-based product developed to optimise skin hydration and comfort following professional procedures. Formulated to support the skin's natural repair response, it works to rebalance moisture pathways, soothe the skin, and support barrier resilience during the critical post-treatment phase. By combining multi-level hydration with soothing, protective, and immediate cooling mechanisms, P.O.S.T. recovery gel supports a more efficient recovery environment, leaving the skin visibly refreshed, hydrated, and resilient.

### KEY ACTIVE INGREDIENTS

Aquaporin complex  
Hyaluronic acid  
Provitamin B<sup>5</sup> (Panthenol)  
Carrageenan

### PRODUCT BENEFITS

- Helps reduce discomfort, redness, and irritation with an immediate cooling effect for enhanced skin comfort
- Delivers multi-level hydration to restore and maintain optimal moisture balance
- Visibly more radiant skin through enhanced hydration
- Ideal for more oily skin types and male clients with facial hair

### PROPERTIES

**Aquaporin complex** - is a multi-component hydration system designed to optimise water movement, balance, and retention within the skin.

**Hyaluronic acid** - three molecular weights work synergistically:

- 2.2 MDa:** provides surface protection and TEWL reduction
- 300 kDa:** enhances epidermal water retention and elasticity
- 50 kDa:** supports deeper cellular hydration, repair and soothing activity.

**Provitamin B<sup>5</sup> (Panthenol)** - provides deep hydration, soothes the skin, supports barrier resilience, and promotes skin regeneration, making it particularly useful in post-treatment recovery.

**Carrageenan** - contributes to an immediate cooling effect, helping to calm post-procedural heat and discomfort.

### DIRECTIONS FOR USE

**Direct application** - Use P.O.S.T. recovery gel instead of P.O.S.T. recovery cream or SOS repair cream as part of the Calm & Hydrate step of the controlled chemical skin resurfacing protocol.

**MIXIT** - Decant 2-4ml P.O.S.T. recovery gel in the palm of one hand. Add 1-2 AZ blue drops to the P.O.S.T. recovery gel and mix. Apply and gently massage into the skin.

**Nanoneedling** - Can be used during nanoneedling to create slip for a more even glide of the PROTONPEN across the skin.
